

MOCK PATIENT MEDICAL CASE REPORT

Patient Information

Patient Name: John Tan

Age: 68

Gender: Male

Primary Condition:

- Chronic Liver Disease

Secondary Condition:

- Hypertension

Allergy:

- Ibuprofen

Current Medication:

- Warfarin

- Amlodipine

Smoking Status:

- Former Smoker

Alcohol Consumption:

- Occasional

Clinical Notes

Patient has a history of elevated liver enzyme levels and requires regular monitoring.

The patient previously experienced mild dizziness after medication adjustments.

Healthcare providers advised caution when prescribing medications that may increase liver burden or interact with anticoagulants such as warfarin.

Patient should avoid medications associated with ibuprofen-related allergic reactions.

Recent Symptoms

- Mild fatigue
- Occasional headache
- Reduced appetite

Doctor Recommendations

- Continue regular liver function monitoring
- Avoid excessive alcohol consumption
- Review medication interactions before taking new drugs
- Seek medical consultation if abnormal symptoms occur
